

1. The Muk Kampul Polder Project

The project is situated north of Phnom Penh. The total area is 30,000 hectares.

2. North Phnom Penh Polder Project

The polder covers a watershed of 85 km². In 1972 14 km of dike embankment has been constructed.

The polder is occupied as follows:

- storage reservoir	: 1,900 ha	} 9.400 ha
- rice land	: 6,000 ha	
- pasture land	: 1,000 ha	
- industrial park	: 500 ha	

The capacity of the pumping station is $72,3 \text{ m}^3/\text{sec}$. Next this pumping station an outlet culvert has been constructed, also with a capacity of $72,3 \text{ m}^3/\text{sec}$, to be used for gravity drainage when the waterlevel outside of the polder is lower than that inside.
